DETAILED ACTION

Page 2

Response to Arguments

1. Applicant's arguments with respect to claims 1&2 and the effective filing of Abecassis (US

6,408,128) of Nov 12, 1998 have been considered but are moot in view of the new ground(s) of

rejection.

Furthermore, applicant states that applicant contemplates fast-forwarding a video so that

the user is not inconvenienced by either having to wait for the tape to pass, at normal speed, a

program which the user is not authorized to watch and having to manipulate the controls to fast-

forward to the next program, and that on the other hand, Abecassis establishes a video map and

skips program segments inappropriate for a particular viewer, and finally, applicant argues that

fast-forwarding a tape and skipping program material in a random access memory are two

different concepts. This argument is moot because "... fast-forwarding a video tape..." is not in

the claims.

Claim Rejections - 35 U.S.C. § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 09/440,639

Art Unit: 2615

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for the purposes of this subsection of an application filed in the United States only if the internation application designated the United States and was published under Article 21(2) of such treaty in the English language.

Page 3

3. Claims 1,2&4 are rejected under 35 U.S.C. 102(e) as being anticipated by Abecassis (US 6,553,178).

Regarding claim 1, Abecassis discloses systems for, and methods of, processing, random accessing, buffering, and playing a video utilizing the information provided by a video map, where the source of the video and video map are, for example, a DVD, a DBS, and/or video-on-demand transmissions, and where the means for playing the video comprises, for example, a DVD player, a personal computer, a set box, and/or a multimedia player, comprising a decoder for decoding the program rating data to generate decoded program rating data, a controller for generating a first control signal for blocking a video/audio signal if a viewable program rating set by a user is lower than the rating of the decoded program rating data, and for generating a second control signal if signal indicating a new program is detected, and a tape speed controller for executing a high-speed search mode when the controller generates the first control signal and for executing the general playback mode when the controller generates the second control signal (see col.28, lines 22-55).

Here Abecassis discloses playing viewer-selected program which includes viewer preferred, selected rating codes; when the viewer requests for this viewer-selected program to be

Application/Control Number: 09/440,639 Page 4

Art Unit: 2615

played, the codes of the played program must match the viewer-selected rating codes, and any portions of the program with unacceptable, unselected rating codes are skipped.

Examiner reads the claimed decoder as the means to determine during reproduction the correct viewer-selected rating codes within a program selected by the viewer; the examiner reads "... first control signal for blocking a video/audio signal if a viewable program rating set by a user is lower than the rating of the decoded program rating data... " as the signal indicating the skipping of portions of a program which contain video/audio information with unacceptable, unselected rating codes, and "... generating a second control signal if signal indicating a new program is detected..." as the signal indicating the playing of portions of a program which contain video/audio information with acceptable, selected rating codes; and the high-speed search mode as the skipping mode; and the new program as the program that contains the portions of a program which contain video/audio information with acceptable, selected rating codes; and the general playback mode as the play mode when playing the portions of a program which contain video/audio information with acceptable, selected rating codes.

Regarding claim 2, the claimed limitations of claim 2 are accommodated in the discussions of claim 1 above.

Regarding claim 4, the claimed limitation a data slicer extracts only the program rating data from the video signal in a general playback mode and outputting the program rating code to

Application/Control Number: 09/440,639 Page 5

Art Unit: 2615

the decoder is accommodated in the decoding function of the playback of viewer-selected program containing viewer selected rating codes as discussed in claim 1 above, since the rating codes contained within the viewer-selected program containing viewer selected rating codes must be extracted from the program before the decoder decodes the rating data to determine the ratings of the reproduced program, in order to determine a match or no match.

Claim Rejections - 35 U.S.C. § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 3&5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abecassis in view of Yuen et al US 6,091,884) and further in view of Choi (US 5,519,549).

Abecassis fails to disclose wherein determining in step (d) whether the new recorded program has been reached is made by a determination of whether a video index search system (VISS) signal is detected, made using the duty cycle of a controller. (Yuen et al means and method for facilitating management, storage, and retrieval of programs on a cassette of magnetic tape, comprising VISS marks which are used to mark the beginning and end of a program in a control track of a tape (see col.6, lines 38-48). In addition, Abecassis and Yuen fail to disclose wherein the detection of the VISS signal is made by using the duty cycle of a controller. Choi (US

Application/Control Number: 09/440,639

Page 6

Art Unit: 2615

5,519,549) teaches wherein when searching for recorded portion, the index information is picked up by detecting the duty cycle variation (see col.1, lines 39-47).

It would have been obvious to modify Abecassis by realizing Abecassis with a VISS system, as taught by Yuen, in order to facilitate the marking of the beginning and end of recorded signal. In addition, it would have been obvious to further modify Yuen by detecting the VISS mark signal by detecting the duty cycle variation of the VISS signal, as taught by Choi.

Regarding claim 5, the claimed limitations of claim 5 are accommodated in the discussions of claim 3 above.

Conclusion

6. Any inquiry concerning this communication or earlier communications from this examiner should be directed to Christopher Onuaku whose telephone number is (703) 308-7555. The examiner can normally be reached on Tuesday to Thursday from 7:30 am to 5:00 pm. The examiner can also be reached on alternate Monday.

If attempts to reach the examiner by telephone is unsuccessful, the examiner's supervisor, Andrew Christensen, can be reached on (703) 308-9644.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

Art Unit: 2615

or faxed to:

(703) 872-9314, (for formal communications intended for entry) and (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application should be

directed to Customer Service whose telephone number is (703) 306-0377.
